43         // 1 | open | http://localhost/tour_management/view/login.php |
44         driver.get("http://localhost/tour_management/view/login.php");
45         // 2 | setWindowSize | 716x824 |
46         driver.manage().window().setSize(new Dimension(716, 824));
47         // 3 | type | name=email | Helen
48         driver.findElement(By.name("email")).sendKeys("Helen");
49         // 4 | type | name=password | 1234ut@
50         driver.findElement(By.name("password")).sendKeys("1234ut@");
51         // 5 | click | id=signin |
52         driver.findElement(By.id("signin")).click();
53         // 6 | click | name=email |
54         driver.findElement(By.name("email")).click();
55         // 7 | click | id=signin |
56         driver.findElement(By.id("signin")).click();
57         // 8 | click | css:center:nth-child(6) |
58         driver.findElement(By.cssSelector("center:nth-child(6)")).click();
59     }
}
```

## Sign up:

The screenshot shows the Selenium IDE interface for a project named "Tour management". The "Tests" pane on the left lists two tests: "Login\*" and "Sign up\*", both marked with a green checkmark. The main area displays the "Sign up\*" test steps in a table format:

Step	Command	Target	Value
20	type	name=password	#Squ*hty9Rth
21	click	name=signupForm	
22	click	name=gender	
23	select	name=gender	label=Female
24	click	name=b_day	
25	type	name=b_day	2017-02-25
26	click	name=password	
27	click	id=signup	
28	type	name=email	helenchora55@gmail.com
29	type	name=password	98765432@

Below the table, there are input fields for "Command", "Target", "Value", and "Description". The "Log" pane at the bottom shows a list of 29 steps, all marked as "OK", indicating successful execution. The final log entry states: "'Sign up' completed successfully".

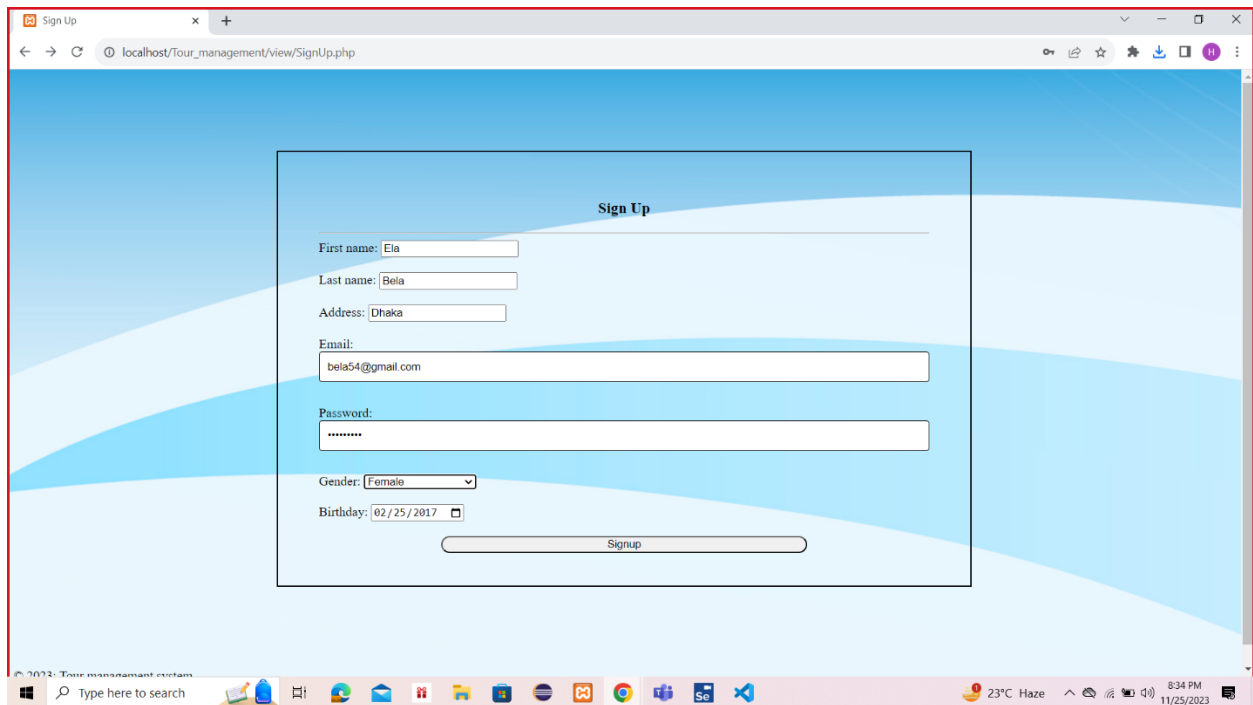

The screenshot shows an IDE window with the Java code for the "Sign up" test. The code is written in a class named "SignupTest" and includes imports for Selenium and Java utilities. The code defines a "setUp()" method to initialize the WebDriver and a "tearDown()" method to quit the driver. The main test method is "signup()", which performs the following actions:

- Opens the URL "http://localhost/Tour\_management/view/Signup.php".
- Sets the window size to 716x824.
- Types the email "helenchora55@gmail.com" into the "email" field.
- Types the password "98765432@" into the "password" field.
- Clicks the "fname" field.
- Clicks the "fname" field.
- Types the first name "Bela" into the "fname" field.

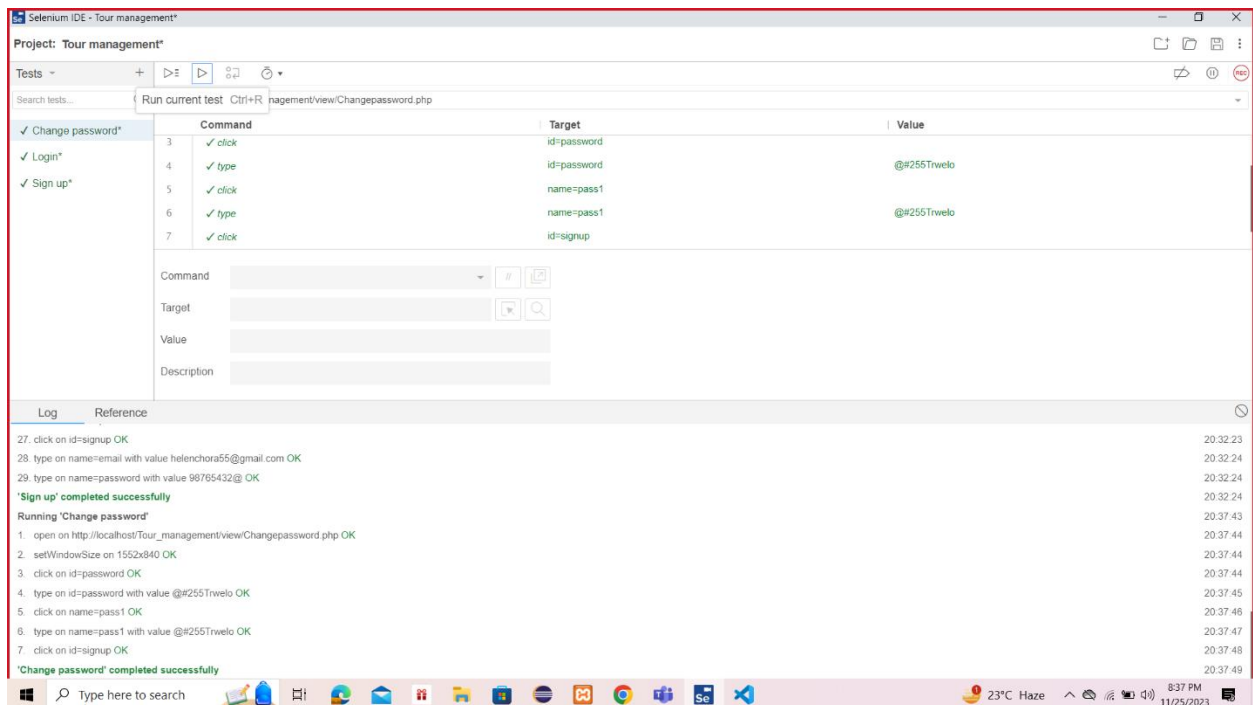

The code is as follows:

```
import org.openqa.selenium.Keys;
import java.util.*;
import java.net.MalformedURLException;
import java.net.URL;

public class SignupTest {
    private WebDriver driver;
    private Map<String, Object> vars;
    @Before
    public void setUp() {
        driver = new ChromeDriver();
        js = (JavascriptExecutor) driver;
        vars = new HashMap<String, Object>();
    }
    @After
    public void tearDown() {
        driver.quit();
    }
    @Test
    public void signup() {
        // Test name: Sign up
        // Step # | name | target | value
        // 1 | open | http://localhost/Tour_management/view/Signup.php |
        driver.get("http://localhost/Tour_management/view/Signup.php");
        // 2 | setWindowSize | 716x824 |
        driver.manage().window().setSize(new Dimension(716, 824));
        // 3 | type | name=email | helenchora55@gmail.com
        driver.findElement(By.name("email")).sendKeys("helenchora55@gmail.com");
        // 4 | type | name=password | 98765432@
        driver.findElement(By.name("password")).sendKeys("98765432@");
        // 5 | click | name=fname |
        driver.findElement(By.name("fname")).click();
        // 6 | click | name=fname |
        driver.findElement(By.name("fname")).click();
        // 7 | type | name=fname | Bela
        driver.findElement(By.name("fname")).sendKeys("Bela");
    }
}
```
